Where have we studied chemical cycles? (Use this table to record as many different circumstances as you can in which the concepts related to this topic apply. Don't just record the obvious ones mentioned explicitly by the instructors, learn to find others. Compare yours to your partners' from time to time. If you fill this one, print another!)

Situation	Description	Scenario/ Lab
Aerobic Respiration	$FADH_2$ is formed from FAD + $2H^+$ during the Kreb's cycle and split to form FAD and $2H^+$ in the electron transport chain. The FAD is then used in the Kreb's cycle...	Out of the Rainforest

Chemical cycles: the interconnection or 'recycling' of chemicals between various bodily processes.
