Where have we used ATP? (Use this table to record as many different circumstances as you can in which the concepts related to this topic apply. Don't just record the obvious ones mentioned explicitly by the instructors, learn to find others. Compare yours to your partners from time to time. If you fill this one, print another!)

Situation	Description	Scenario /Lab
Electron Transport Chain	The production of ATP is powered by the movement of hydrogen ions across the cristae membrane within the mitochondrion.	Out of the Rainforest

ATP - adenosine triphosphate: a form in which energy is stored within organisms; energy is gained by the breaking of the phosphate bonds
